DODGE® MOTORIZED TORQUE-ARM II

With 60 years of proven dependability and more than 2 million units in service throughout the world, Dodge Torque-Arm speed reducers are the standard of the industry. Now, that legacy continues with the newest generation in shaft mounted speed reducers: The Dodge Motorized Torque-Arm II - offering patented innovations, new features, plus increased torque and horsepower ratings.

The Dodge Motorized Torque-Arm II surpasses other reducers on the market because of its industry proven design and patented features.

This powerful line of shaft mounted speed reducers - in 7 case sizes with Class 2 rating through 100 horsepower (HP) - offers unparalleled torque ratings and is quickly becoming the new industry standard. Improved features include: an all-new backstop concept, a patented sealing system, a state-of-the-art, totally modular design with a patented twin tapered bushing system.

The backstop design features a unique sprag profile for extended life and designed for use with lubricants containing EP additives.

In addition, the Motorized Torque-Arm II line has a patented, premium sealing system that uses a Harsh Duty oil seal protected by a metal excluder seal with rubbing lip. This harsh duty sealing system makes this reducer series a perfect fit for today's harsh duty industries such as aggregates, mining, cement, asphalt, mixing & milling and ethanol. Its patented twin tapered bushing system - in standard length, short shaft, and metric versions - offers all the features of our standard twin tapered Torque-Arm bushing design which are unique to Dodge.

The patented insertable tapered wedge enables the optional extended tapered bushing kit to be applied for shorter shaft lengths, allowing the replacement of straight bore reducers.

DODGE® MOTORIZED TORQUE-ARM II

Accessories

MTA uses standard TA II accessories

Standard Twin Tapered Bushing System

is an easy on, easy off, no-wobble bushing system featuring a fully split, ductile iron 8° taper and reliable twin support. Available in inch and metric bores. Increased bore capability in many sizes.

Our Short-Shaft Twin-Tapered Bushing Kits

eliminate the need for full-length shafts. Constructed with ductile iron, it has all the features of our standard bushing system. Available in both inch and metric bores.

MTA Bushing Covers

provide protection from the spinning bushing bolts and offer an added layer of contamination protection.

The MTA II is drilled and tapped for the Heavy Duty ABS covers. The Aluminum covers require customer modification of the gearbox to allow fitment.

ABS Polymer

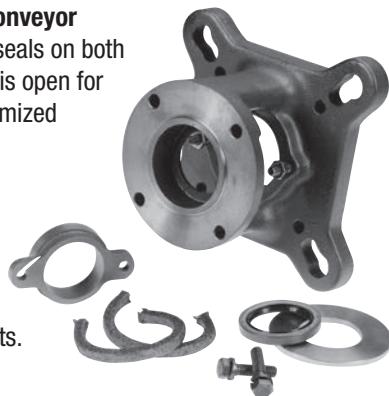

Aluminum

This new-design **Backstop** option helps prevent reverse rotation in high stop-start loads, and results in less wear and longer life. Its centrifugal sprag design operates with standard and EP lubricants and requires no external lubrication. NOTE: MTA II reducers require a larger backstop than equivalent TA II. See MTA II section for ALL MTA II accessories.

The **Cema Bolt-On Screw Conveyor Adapter** features double-lip seals on both surfaces. The adapter center is open for contaminant drop out for optimized sealing.

An optional **Adjustable Packing Kit** bolts to the standard adapter and provides a proven sealing option for hostile environments. Packing can be retightened.

The **Screw Conveyor Driveshafts** are made from high alloy steel and engineered To CEMA dimensions. They are three-bolt drilled and their tapered fit ensures simple installation.

The rugged locking plate (patent pending) also provides a mechanical shaft removal feature. #316 Stainless Steel drive shafts also available.

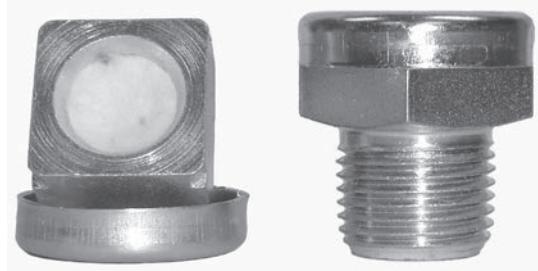

Ruggedly constructed, the **TA Rod Kit** includes standard Brackets and Offers universal mounting options.

DODGE® MOTORIZED TORQUE-ARM II

Torque-Arm Family Breather Technology

1.

1. Standard Breather

- Cotton filter media
- Screen to support filter
- Chamber to allow oil to collect and return to reducer
- Non captured filter (should not clog and block air exit)

Harsh Duty Breathers are available

2.

2. Hydra-Lock Desiccant Breather

- Built in standpipe
- 3 micron filter media top and bottom
- Desiccant material changes color from blue (good) to pink (replace)
- Check valve system, so breather is only open to atmosphere under pressure or vacuum. Closed when not running.

3.

3. Fully Enclosed Canister Breather

- Allows no outside air
- Excellent protection for extreme wet environments

4.

4. Optional Position D Breather Kit

- Use when reducer is mounted in position D (G1-65)
- Includes: Enclosed Breather, sight glass, all necessary piping to allow for fitment to all sizes of MTA

DODGE® MOTORIZED TORQUE-ARM II

Motorized Torque-Arm II Shaft Mount Speed Reducers

Easy Selection Method (For Electric Motors) For Motorized Torque-Arm II Reducer And Screw Conveyor Drive Reducer Applications

When to Use Easy Selection

The Easy Selection tables for MTA II reducers are for electric motor selections up to 100 horsepower with output speeds up to ~150 RPM, using AGMA recommended application class numbers. For extreme shock or high energy loads which must be absorbed, as when stalling; for a power source other than an electric motor; or for extreme ambient temperatures or oversized equipment, consult Dodge Application Engineering, 864-284-5700.

How to Select

Step 1: Determine Class of Service - See Table 1 to determine Load Classification for applications under normal conditions.

Find the type application and duty cycle:

Class 1 - Steady load not exceeding Motor HP rating and light shock loads during 10 hours a day. Moderate shock loads are allowable if operation is intermittent. For Class 1 applications, the maximum value of starting and momentary peak loads should not exceed 2 x Motor HP rating. If it exceeds this amount it should be divided by 2 and the result used in the selection table instead of the Motor HP rating.

Class 2 - Steady load not exceeding Motor HP rating for over 10 hours a day. Moderate shock loads are allowable during 10 hours a day. For Class 2 applications, the maximum value of starting and momentary peak loads should not exceed 2.8 x Motor HP rating. If it exceeds this amount it should be divided by 2.8 and the result used in the selection table instead of the Motor HP rating.

(Note: most Torque-Arm applications are class 2 or better. Torque-Arm products are usually used in heavy duty applications)

Step 2: Determine Reducer Size - From the Easy Selection, Class I, II or III, Tables, pages G1-18 thru G1-25, find the reducer size for the application horsepower and output speed.

Step 3: Compare Hollow Shaft Bore with the size of the driven shaft. All Dodge MTA II Taper Bushed reducers require bushings to mount reducer to driven shaft. Refer to reducer pages for available bushings. If the driven shaft is larger than the bore of the selected reducers, the shaft must be machined to the proper size, or select a larger reducer. Check driven shaft and key for strength.

Step 4: Check Dimensions - See Selection/ Dimension pages for reducer dimensions, weights, part numbers and Torque-Arm rod mounting positions. See Engineering/ Technical pages for reducer mounting positions, G1-61.

Step 5: Select Accessories - See Selection/Dimensions pages for description, dimensions, weights and part numbers for accessories for the MTA II reducer selected: Rod Assembly - Bushing Kit – Backstop Assembly – Bushing Covers – Screw Conveyor Adapter – Adjustable Packing Kit – Drive Shaft – Optional harsh duty breathers

Shaft Mount Reducer Application: A 10 HP 1750 RPM motor is used to drive a belt conveyor moving sand at 70 RPM. The conveyor is uniformly loaded and operates 16 hours per day. The head pulley shaft diameter is 2-3/16". The user specifications call for a means of holding the conveyor from moving backwards.

Step 1: Determine Class of Service - From Table 1 on page G1-6 locate the appropriate application, "belt conveyors, uniformly loaded or fed" for over 10 hours per day. This load is classified as a Class II application.

Step 2: Determine Reducer Size - From Class II Selection, page G1-22, find the column for 10 HP and read down to 70 RPM. At 71 RPM a reducer size M3H25T21C is the closest correct selection. If a full reducer and motor assembly is desired, see page G1-27 and use part number M3H25T21C1018, to include the motor.

Step 3: Compare Hollow Shaft Bore of a size M3 reducer size with the head pulley shaft diameter. Per page G1-38, 2-3/16" is a bore available for this size of reducer. It will work in this application. Be sure to check the driven shaft and key for strength.

Step 4: Check Dimensions and Weights -See Selection/ Dimension pages for reducer dimensions, weights, part numbers and other pertinent drive dimensions, as well as information on Torque-Arm rod mounting positions. See Engineering/Technical pages for information on reducer mounting positions G1-61.

Step 5: Select Accessories - See Selection/Dimensions pages to pick out accessories for this application: TA4207BS Backstop Assembly (MTA II uses larger backstops than same case size TA II), to hold the conveyor from moving backwards; TA3203RA Tie Rod Assembly, for attaching the reducer to the structure. ABS Polymer Bushing covers, to cover and protect the rotating bushing bolts.

DODGE® MOTORIZED TORQUE-ARM II

Determining Service Class Class I - 1.0 service factor, Class II - 1.4 service factor, Class III - 2.0 service factor

Notes:

1. Crane drives are to be selected based upon the gear tooth bending strength using the numeric service factors, K_{SF} , shown in the table or by analysis such as Miner's Rule. In all cases, the pitting resistance service factor shall be a minimum of 1.0. Contact gear manufacturer for ratings.
2. Service factors for paper mill applications are applied to the nameplate rating of the electric drive motor at the motor rated based speed.
3. Anti-friction bearings only. Use 1.5 for sleeve bearings.
4. A service factor of 1.00 may be applied at base speed of a super calender operating over-speed range of part range constant power, part range constant torque where the constant power speed range is greater than 1.5 to 1. A service factor of 1.25 is applicable to super calendars operating over the entire speed range at constant torque or where the constant power speed range is less than 1.5 to 1.

DODGE® MOTORIZED TORQUE-ARM II

Determining Service Class Class I - 1.0 service factor, Class II - 1.4 service factor, Class III - 2.0 service factor

Notes:

1. Because crane drive selections may require a service factor, K_{SF} , greater than 2.0. Class Numbers are not applicable. Crane drives are to be selected based upon the gear tooth bending strength using the numeric service factors, K_{SF} , shown in the table or by analysis such as Miner's Rule. In all cases, the pitting resistance service factor shall be a minimum of 1.0. Contact gear manufacturer for ratings.
2. The class numbers listed in the table A.3 for paper mill applications are consistent with those show in TAPPI (Technical Association of Pulp and Paper Industry) Technical Information Sheet 0406-18-1967, Service Factors for Gears on Major Equipment in the Paper and Pulp Industry.
3. Anti-friction bearings only.
4. A Class Number of 1.00 may be applied at base speed of a super calender operating over a speed range of part range constant power, part range constant torque where the constant power speed range is greater than 1.5 to 1. A Class Number of II is applicable to super calendars operating over the entire speed range at constant torque or where the constant power speed range is less than 1.5 to 1.

DODGE® MOTORIZED TORQUE-ARM II

MTA2 through MTA8 Nomenclature and Descriptions

MTA C-Face Gearmotor Nomenclature

M6H67T28C2518 Torque Arm Reducer & Motor

M - Motorized Torque-Arm II

6 - Case Size, **H** - Heavy Duty,

7 - Nominal Ratio, **T** - Tapered Bore

28 - 280 - Motor Frame, C - NEMA - C-Face, (TSC - accommodates NEMA TS short shaft frame, 2 pole, 280 frame and above)

25 - 25HP Motor, 18 - 1800 RPM Motor Speed

(5) Bushing kit required to mount TA II reducer to driven shaft

(6) Bushing kit is not required to mount TA II reducer on SCS Drive Shaft in a screw conveyor application

(7) Standard Shaft Bushing Kit includes two standard bushings with back-up plates and snap rings; hardware, and key

(8) Short Shaft Bushing Kit includes one standard bushing, one long bushing with insertable wedge; two back-up plates with snap rings; hardware and key. This is an optional bushing for after market, short shaft mounting.

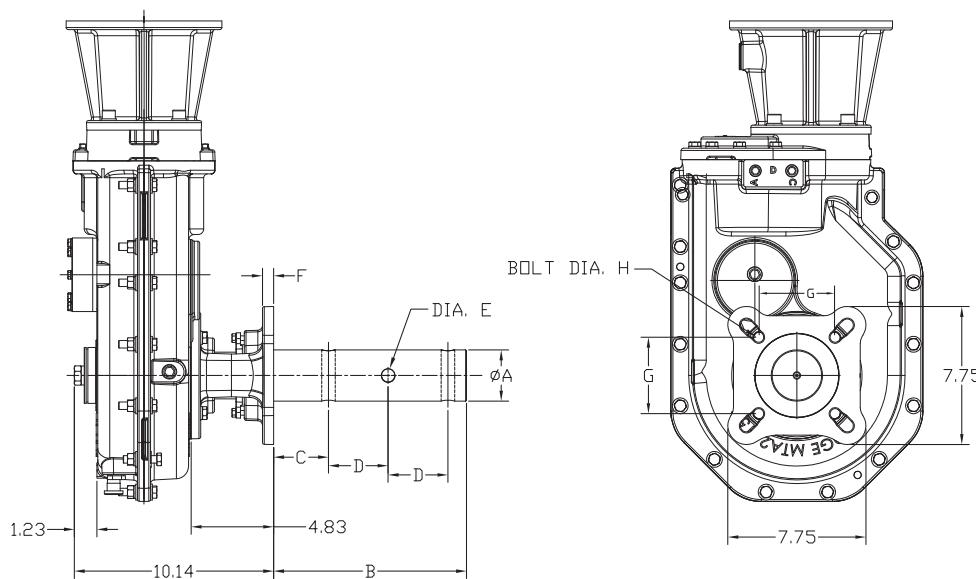

(9) Minimum keyseat and shaft length required to mount reducer with bushing kit

(10) Always check the driven shaft and key for strength

▲ AGMA maximum bore size

(5) Bushing kit required to mount TA II reducer to driven shaft

(6) Bushing kit is not required to mount TA II reducer on SCS Drive Shaft in a screw conveyor application

(7) Standard Shaft Bushing Kit includes two standard bushings with back-up plates and snap rings; hardware, and key

(8) Short Shaft Bushing Kit includes one standard bushing, one long bushing with insertable wedge; two back-up plates with snap rings; hardware and key. This is an optional bushing for after market, short shaft mounting.

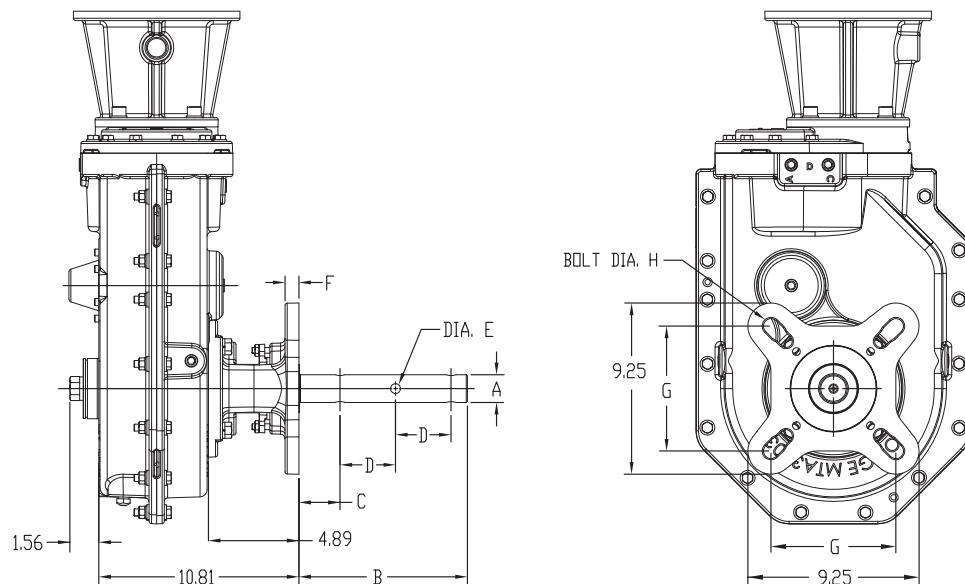

(9) Minimum keyseat and shaft length required to mount reducer with bushing kit

(10) Always check the driven shaft and key for strength

- Oil quantity is approximate. Service with lubricant until oil runs out of oil level hole as indicated per drawings in figure 1.
- Below 15 RPM output speed, oil level must be adjusted to reach the highest oil level plug. If reducer position is to vary from those shown in Figure 1, either more or less oil may be required. Consult Dodge.
- Position B not shown OR recommended, check with factory
- ② For Position D - It is recommended to use "Position D Breather Kit" part number - 472300.

- (1) Assumes auxiliary cooling where recommended in the catalog.
- (2) Pour point of lubricant selected should be at least 10°F lower than expected minimum ambient starting temperature.
- (3) Extreme pressure (EP) lubricants are not necessary for average operating conditions. When properly selected for specific applications, Torque-Arm II backstops are suitable for use with EP lubricants.
- (4) Special lubricants may be required for food and drug industry applications where contact with the product being manufactured may occur. Consult a lubrication manufacturer's representative for his recommendations.
- (5) For reducers operating in ambient temperatures between -22°F (-30°C) and 20°F (-6.6°C) use a synthetic hydrocarbon lubricant, 100 ISO grade or AGMA 3 grade (for example, Mobil SHC627). Above 125°F (51°C), consult Dodge Gear Application Engineering (864) 297-4800
- (6) Mobil SHC630 Series oil is recommended for high ambient temperatures.
